SUMMARY

Computer Science and Engineering graduate with hands-on experience building full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js) and Next.js. Proficient in TypeScript, REST API development, Git-based collaborative workflows, and AI-assisted development tools. Passionate about modern web technologies and delivering scalable, production-grade solutions.

EDUCATION

Bangladesh University of Business & Technology (BUBT) Jan 2022 – Dec 2025
B.Sc. in Computer Science and Engineering

Police Lines School & College, Bogura 2020
HSC - Science GPA: 5.00

Unukhan Paglapir High School, Sirajganj 2018
SSC - Science GPA: 4.89

SKILLS

Frontend: React.js, Next.js, JavaScript, HTML, CSS, XML

Backend: Node.js, Express.js, REST API Development, PHP

Databases: MongoDB, MySQL (Basic)

Languages: JavaScript, TypeScript, Python, Java, Kotlin, C

Tools & VCS: Git, GitHub, Git Workflow & Collaboration, VS Code

Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms (Basic), AI-Assisted Development (Claude / chatgpt, Grok)

Operating Systems: Windows, Linux (Basic)

Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Quick Learner, Time Management

PROJECT EXPERIENCE

Obstacle Avoiding Robot Car — Academic Project

- Built a robot car that automatically detects objects in front of it and changes direction to avoid them.
- Wrote the logic code that tells the car when to move forward, stop, or turn based on sensor data.
- Connected hardware parts like motors and sensors with software code — similar to how backend logic connects with a database.
- Tested and fixed bugs to make the car respond faster and more accurately.

Bike Sharing System — Academic Project

- Designed a web system where users can register, rent a bike, and return it — similar to a real e-commerce booking flow.
- Created a database structure to store users, bikes, rental history, and payments — similar to MongoDB or PostgreSQL schema design.
- Documented the full project following IEEE format including system design, diagrams, and result analysis.
- Practiced software planning skills like requirement gathering, system design, and workflow mapping used in real dev teams.

Bike Race Game — Kotlin, XML

- Developed a playable Android game using Kotlin with features like player control, score tracking, and collision detection.
- Built all UI screens using XML layouts — similar to building responsive frontend components in React.js.
- Used Object-Oriented Programming (OOP) to organize the code into clean, reusable parts — the same approach used in Node.js and Express.js backend development.
- Managed app state and screen transitions using Android lifecycle methods — similar to React state and component lifecycle.

Student Management System — JavaScript

- Built a web app to add, view, update, and delete student records — full CRUD functionality similar to a REST API.
- Used JavaScript to dynamically update the page without reloading — the same concept behind React.js components.
- Handled form inputs, data validation, and user interactions entirely on the frontend using vanilla JavaScript.
- Organized code into separate functions and modules — a good practice used in React and Node.js projects.

Library Management System — HTML, CSS, PHP

- Built a full-stack web app where admins can manage books and members — similar to an e-commerce admin dashboard.
- Developed backend logic using PHP to handle all data operations (add, update, delete, search) connected to a MySQL database — similar to Express.js with MongoDB.
- Created a login system with admin and member roles so different users see different pages — similar to JWT-based authentication in MERN stack apps.
- Designed the MySQL database with proper tables and relationships — the same thinking used in PostgreSQL and MongoDB schema design.
- Built the full frontend using HTML and CSS with clean, responsive pages that work on different screen sizes.

CERTIFICATIONS

- **Certificate of Completion** – Academy of Bachelor of Science in Computer Science & Engineering (CSE)
